

Manager, R&D and Engineering

Ginolis is currently seeking a highly skilled **Manager, R&D and Engineering** to join the Ginolis team in Oulunsalo. The manager is in charge of product development projects and project engineering.

The main tasks include:

- Taking care of daily operations of product development and design
- Ensuring that the technological resources and skills are aligned with the company's business needs in a short and long-term
- Implementation responsibility of the company's technology strategy

Additionally, you will be responsible for:

- Manage R&D and project engineering resources
- Ensuring technologies are used efficiently and profitably

To be successful in this position, we expect you to have the following background and skills:

- Master or Bachelor of Science degree in a technical or engineering field or work experience in a relevant field
- Expertise in a technological development area
- Managerial experience
- Leadership and organizational abilities
- Excellent communication skills
- Fluent written and spoken English

If you feel that this would be your position, please submit your application, CV with references, and salary expectations to recruitment@ginolis.com by 30.11.2020.

For further information, please contact Markku Käsäkoski tel. +358 40 545 0903 or markku.kansakoski@ginolis.com.

About Ginolis

From standard products to fully customized systems, Ginolis provides production automation solutions for medical, lateral flow, and microfluidic device manufacturing. Whether you need to produce small or large volumes, Ginolis's scalable solutions bring consistency, high-quality, and accuracy for your medical device manufacturing. Ginolis's standard modules give you the flexibility to make a wide range of lateral flow devices with a single automation line without compromising quality and taking only a minimal footprint in your production facilities.
